

February 27, 1986

TO: File

FROM: Thomas J. Suchoski, Reclamation Geologist *TJS*

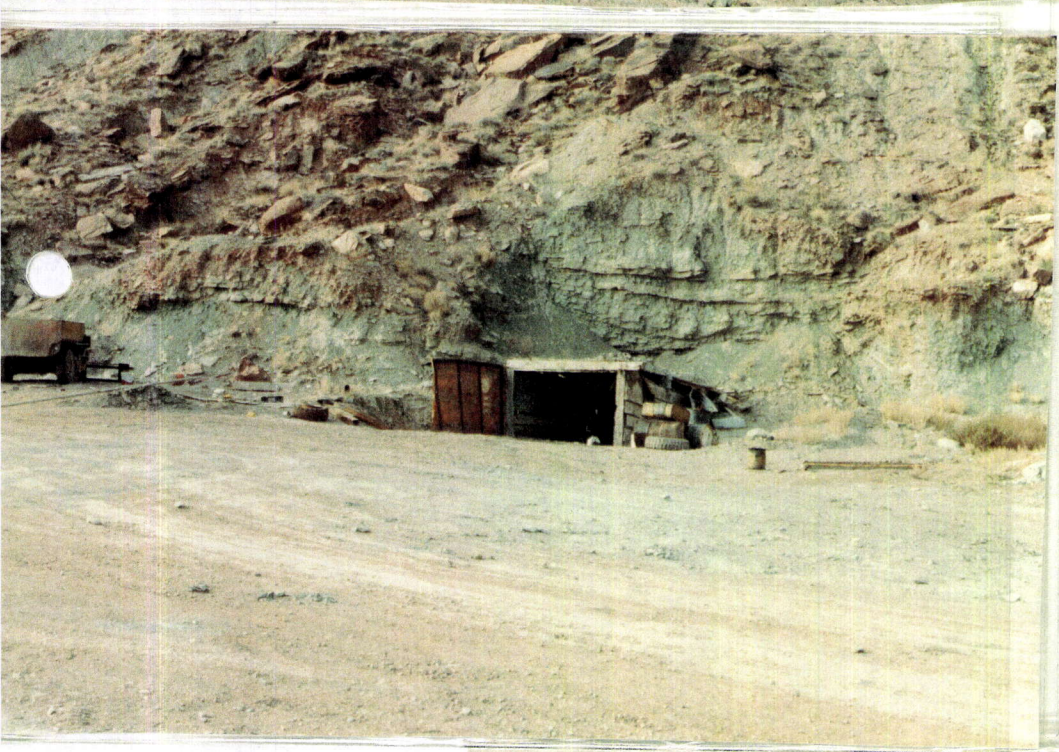

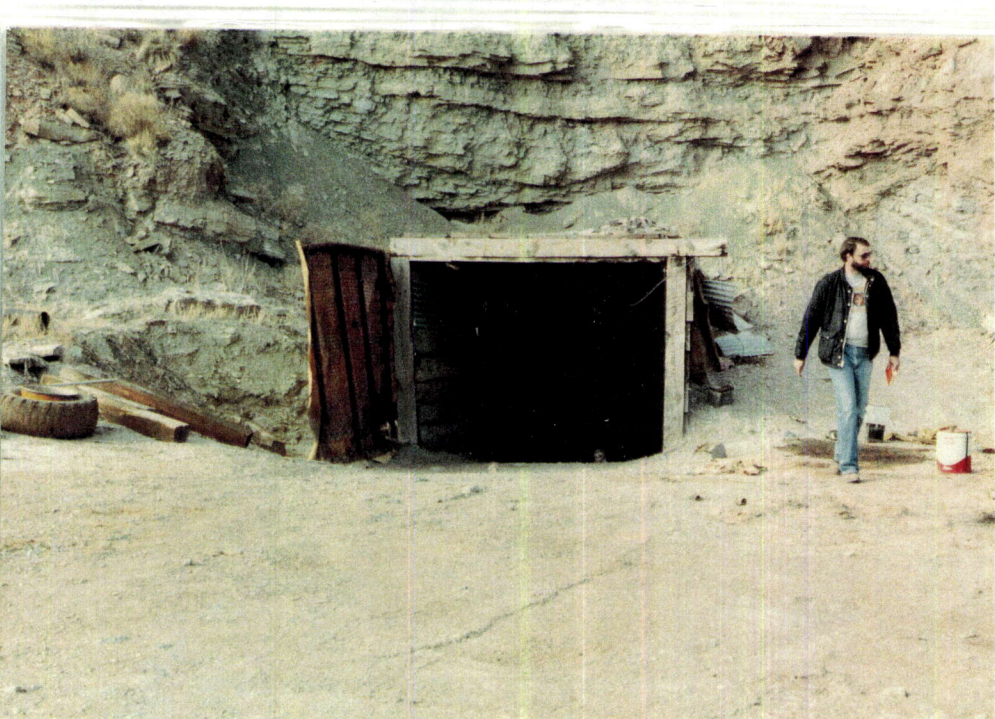

RE: Seven Mile Mine, DOE/019/013, Grand County, Utah

On February 12, 1986, Tom Suchoski and Dave Hooper, of the Division staff, accompanied Ms. Terry McParland of the Grand Resource Area of the BLM in Moab on a site visit of the Seven Mile Mine. The site was visited for the purpose of ascertaining the status of the facilities and whether any of the recommended reclamation work had been undertaken. The site is in a state of disrepair. However, affidavits of labor for the 1985 year were found at all portal entries and surface facilities sites. These affidavits were signed by Mr. John L. Bible of Power Oil. It is assumed, that based on the assessment work that has been done, that Power Oil Company is taking responsibility for the operation through G. E. Uranium Management Company of Colorado.

The entries to the mine are presently open, erosion gullies on the pads and waste dumps appear not to have been regraded. Refuse and litter at the bottom of mine dumps and mine site area have not been cleaned up. Photographs were taken of the portals associated with the operation. A site visit in August of 1984 showed no surface equipment on site presently, it shows a compressor and generator that have been placed in use at the site, also a flat bed truck is located at the surface facility site of the operation.

It is recommended that Mr. Bible of Power Oil be contacted and a determination made of the responsible parties and the proposed future development activities associated with the site.
